**Coordinator**

**Ms. K. Srujana** M. Tech
**Assistant Professor, Dept. of CSE(CS)**

# Instructions to Students for Community Service Project

**Please read the detailed Guidelines on Community Service Project hosted on the website of AP State Council of Higher Education https://apsche.ap.gov.in**

**Link:**
**https://apsche.ap.gov.in/Pdf/Guidelines%20for%20the%20OJT%20Internship%20Community%20Service%20Project.pdf**

1. It is mandatory for all the students to complete 2 months (180 hours) of Community Service Project as a part of the 10-month mandatory internship/on the job training.
2. Consider yourself a committed volunteer in the community, you work with.
3. Every student should identify the **village/community/habitation** for Community Service Project (CSP) in consultation with the College Principal/the authorized person nominated by the Principal.
4. Report to the community/habitation as per the schedule given by the College. You must make your own arrangements for transportation to reach the community/habitation.
5. You will be assigned a Faculty Guide from your College. He/She will be creating a WhatsApp group with your fellow volunteers. Post your daily activity done and/or any difficulty you encounter during the programme.
6. You should maintain punctuality in attending the CSP. Daily attendance is compulsory.
7. You are expected to learn about the community/habitation and their problems.
8. Know the leaders and the officials of the community/habitation.
9. While in the project, always wear your College Identity Card.
10. If your College has a prescribed dress as uniform, wear the uniform daily.
11. Identify at least five learning objectives in consultation with your Faculty Guide. These learning objectives can address:
    - Information about the community, including the realities and

problems of the society.

- Need for creating awareness on socially relevant aspects/programs.
- Acquiring specific Life Skills.
- Learning areas of application of knowledge and technologies related to your discipline.
- Identifying developmental needs of the community/habitation.

12. Practice professional communication skills with team members, and with the leaders and officials of the community. This includes expressing thoughts and ideas effectively through oral, written, and non-verbal communication, and utilizing listening skills.
13. Be regular in filling up your Program Book. It shall be filled up in your own handwriting. Add additional sheets wherever necessary.
14. At the end of Community Service Project, you shall be evaluated by the person in-charge of the community/habitation to whom you report to.
15. There shall also be an evaluation at the end of the community service by the Faculty Guide and the Principal.
16. Do not indulge in any political activities.
17. Ensure that you do not cause any disturbance to the inhabitants or households during your interaction or collection of data.
18. Be cordial but not too intimate with the people you come across during your service activities.
19. You should understand that during this activity, you are the ambassador of your College, and your behavior during the community service programme is of utmost importance.
20. If you are involved in any discipline related issues, you will be withdrawn from the programme immediately and disciplinary action shall be initiated.
21. Do not forget to keep up your family pride and prestige of your College.
22. Remember that you are rendering valuable service to the society and your role in the community development will become part of the history of the community.

(ESTD – 1995)

# Certificate from Official of the Community

This is to certify **SHAIK MAHABOOB BASHA** Reg. No **25095A3705** student of *III Year I Semester B. Tech,* CSE(Cyber Security) Department, Rajeev Gandhi Memorial College of Engineering and Technology (Autonomous), Nandyal underwent community service in Nerawada from **25/05/2026 to 04/07/2026.**

The overall performance of the Community Service Volunteer during his/her community service is found to be _____Satisfactory/Good.

Authorised Signature with Date and Seal

# ACKNOWLEDGEMENT

We express our heartfelt gratitude to our **Mentor, Mrs. C. K. Indira**, **Assistant Professor, Department of CSE(CS)**, whose valuable guidance, encouragement, and constant support played a vital role in the successful completion of this **Community Service Project**. Their expertise and motivation helped us carry out the project effectively and meaningfully.

We sincerely thank our **Internship Coordinator, Ms. K. Srujana**, Assistant Professor, Department of CSE(CS), for her valuable guidance, encouragement, and continuous supervision throughout the successful completion of the **Community Service Project**.

We express our gratitude to **Dr. R. Kaviarasan garu**, Head of the Department of CSE(CS), and all the teaching and non-teaching staff of the Department of CSE(CS), **Rajeev Gandhi Memorial College of Engineering and Technology**, for their continuous encouragement, cooperation, and support during the various stages of our project.

We are deeply grateful to our respected **Principal, Dr. T. Jaya Chandra Prasad garu**, for his constant encouragement, valuable support, and for providing us with the necessary facilities and opportunities to successfully complete our Community Service Project.

At the outset, we express our sincere thanks to our honourable **Chairman, Dr. M. Santhi Ramudu garu**, for providing excellent academic support, encouragement, and the necessary resources throughout our course of study.

Finally, we express our deepest gratitude to our **parents**, whose unconditional love, affection, encouragement, and blessings have always been our greatest source of strength and motivation. Whatever we achieve is made possible through their constant support and blessings.

**Thank you all for your valuable support and encouragement in making this Community Service Project a successful and meaningful learning experience.**

Shaik Mahaboob Basha (25095A3705)

# 1.EXECUTIVE SUMMARY

## 1.1 Overview about Community:

The selected community is a village/habitation where residents depend on local resources for their daily needs. Agriculture and other local occupations are the main sources of livelihood. The community has basic water resources including borewells, public water supply, hand pumps, drainage channels, and other local water sources. During the survey, the condition of local water sources, possible causes of pollution, waste disposal practices, sanitation, and awareness about water protection were studied. The project also focused on creating awareness among residents about preventing water pollution, proper waste disposal, sanitation, and protection of water resources.

## 1.2 Summary of Activities

- Visited local water sources and observed their condition and surroundings.
- Interacted with community members to understand common causes and effects of water pollution.
- Created awareness among residents about preventing water pollution, proper disposal of waste, and maintaining clean surroundings.

## 1.3 Learning Objectives

- To understand the causes and effects of water pollution.
- To identify common sources of water pollution in the community.
- To understand the importance of sanitation, drainage, and proper waste disposal.
- To study basic methods used for preventing and controlling water pollution.
- To develop awareness about protecting water resources and sustainable water management.

## 1.4 Learning Outcomes:

- To understand the major causes of water pollution.
- To identify visible signs and possible sources of contamination.
- To understand the effects of polluted water on people and the environment.
- To learn about basic water-quality monitoring and pollution-control practices.
- To understand the importance of community participation in protecting water resources

# 2.OVERVIEW OF THE COMMUNITY

The Community Service Project was conducted in a community located in and around Nandyal, Andhra Pradesh. Nandyal is an important urban centre in the region and is surrounded by communities with diverse social and economic backgrounds. The community depends on public and local facilities for its daily needs, with water resources being an essential part of daily life. The project focused on understanding the community, its water resources, possible pollution sources, existing sanitation practices, and awareness regarding protection of water bodies.

## 2.1 About the Community

The selected community is located in and around the city of Nandyal, Andhra Pradesh. The area consists of households belonging to different social and economic backgrounds. People depend on agriculture, small businesses, private employment, daily wage work, and other local activities. Water is required for drinking, household activities, agriculture, and other daily needs. The community service project focused on understanding local water-related problems and creating awareness about preventing water pollution.

## 2.2 Historical Profile

Nandyal has developed as an important town and regional centre in Andhra Pradesh. The surrounding area has a long association with agriculture, local trade, and community-based activities. Over time, growth of the town and surrounding settlements has increased pressure on natural resources and public services. Water resources and drainage facilities have therefore become important parts of community infrastructure. Proper maintenance and responsible use of these resources are necessary to reduce pollution and protect the local environment.

## 2.3 Community Diversity

The community consists of people from different social, cultural, and economic backgrounds. Residents follow different occupations and have varied lifestyles and household conditions. Despite these differences, clean water and a healthy environment are common requirements for all sections of the community. Community participation is therefore important in maintaining

cleanliness, preventing waste from entering water sources, and protecting local water resources.

## 2.4 Community Traditions

The people of the community follow various local traditions and participate in cultural and social activities. Festivals, family functions, religious and community gatherings are important parts of social life. These gatherings can also provide opportunities to create awareness about cleanliness, sanitation, waste disposal, prevention of water pollution, and environmental protection.

## 2.5 Community Ethics and Values

The community gives importance to values such as cooperation, mutual respect, responsibility, cleanliness, and helping others. These values are important for maintaining a healthy environment. Responsible disposal of household waste and protection of water sources are also community responsibilities. Residents can contribute by avoiding disposal of waste into drains and water bodies, maintaining cleanliness, and reporting pollution-related problems.

## 2.6 Socio-Economic Conditions of Community

Thesocio-economic conditions of the community vary among households. People are engaged in agriculture, small businesses, private employment, daily wage work, and other local activities. Household income and living conditions may differ from one family to another. The project therefore considered practical and affordable measures such as proper waste disposal, keeping drains clean, reducing littering, and community awareness. These measures can help reduce pollution without requiring the expensive changes at household level.

The community service project helped identify water-pollution-related concerns and create awareness about keeping water sources and surrounding areas clean. Proper sanitation, responsible waste disposal, and regular monitoring can support a healthier community.

# 3.COMMUNITY SERVICE PART

The Community Service Project was carried out in the selected community in Nandyal, Andhra Pradesh. The project activities focused on understanding local water resources, identifying possible sources of pollution, interacting with residents, conducting a community survey, and creating awareness about prevention of water pollution. The activities undertaken during the project are presented in the activity log below.

## 3.1 Activities Undertaken

The project started with a visit to local water sources and surrounding areas to understand their condition and the role they play in the community. Students observed visible waste, drainage conditions, cleanliness, and possible sources of contamination. They interacted with community members to understand water-pollution-related problems.

A community survey was conducted to collect information about water sources, waste disposal, drainage, cleanliness, pollution concerns, and awareness. A questionnaire was used to collect responses from community members. Direct interaction helped in understanding their views and requirements.

An awareness programme was conducted to explain the causes and effects of water pollution, proper waste disposal, sanitation, protection of water sources, and water conservation. Community members were encouraged to avoid dumping waste into drains and water bodies and to maintain cleanliness around local water sources.

The major activities conducted during the project are shown in **Table 3.1**.

## Table 3.1: Activity Log of Community Service Project

| S. No. | Day | Date | Activity |
|---|---|---|---|
| 1 | Day 1 | Monday, 25/05/2026 | Visit to local water sources and introduction to the community |
| 2 | Day 2 | Saturday, 30/05/2026 | Observation of water resources and identification of possible pollution sources |
| 3 | Day 3 | Wednesday, 03/06/2026 | Conducting household/community survey using questionnaire |
| 4 | Day 4 | Saturday, 06/06/2026 | Interaction with community members regarding water pollution problems |
| 5 | Day 5 | Monday, 15/06/2026 | Awareness programme on water pollution, sanitation, and waste disposal |
| 6 | Day 6 | Wednesday, 24/06/2026 | Awareness about pollution prevention, water protection, and conservation |
| 7 | Day 7 | Wednesday, 01/07/2026 | Review of survey observations and community feedback |
| 8 | Day 8 | Saturday, 04/07/2026 | Preparation of project findings and documentation |

The project activities helped the students understand practical water-pollution problems faced by the community. Photographs of the survey, interaction, water-source observation, and awareness activities can be included as supporting evidence in the report.

## 3.2 Values Acquired

The Community Service Project helped the students develop important personal and social values through direct interaction with the community. The major values acquired during the project include:

- **Social Responsibility:** Understanding the importance of contributing to community welfare.
- **Empathy:** Understanding the concerns of community members regarding pollution and cleanliness.
- **Teamwork:** Working together with other students during surveys and awareness activities.
- **Respect:** Interacting respectfully with people from different backgrounds.
- **Responsibility:** Completing assigned project activities properly and on time.
- **Environmental Responsibility:** Understanding the importance of conserving water and protecting water resources.
- **Community Participation:** Recognizing the importance of involving local people in solving community problems.

## 3.3 Life Skills Acquired

The project provided practical opportunities to develop useful life skills. Direct interaction with residents improved communication and interpersonal skills. Students learned how to ask questions, listen carefully, collect information, and understand different viewpoints.

- **Communication Skills:** Interacting clearly and politely with community members.
- **Teamwork:** Coordinating with team members to complete project activities.
- **Observation Skills:** Identifying drinking water facilities and community problems.
- **Problem-Solving:** Thinking about possible solutions to water-related issues.
- **Time Management:** Planning and completing activities according to the project schedule.
- **Leadership:** Taking responsibility for assigned activities.
- **Decision-Making:** Understanding community needs and selecting suitable awareness activities.
- **Confidence:** Developing confidence through direct interaction with the public.

## 3.4 Technical Skills Acquired

The project also provided an opportunity to develop basic technical and practical skills related to environmental observation and community data collection. Students gained an understanding of pollution sources, water quality, waste management, sanitation, and environmental protection.

The major technical skills acquired include:

- Understanding the basic functioning of a drinking water treatment facility.
- Observing the different stages involved in water purification.
- Understanding the importance of water quality and regular monitoring.
- Preparing and using a questionnaire for community surveys.
- Collecting and organizing survey information.
- Recording observations related to drinking water facilities.
- Preparing activity records and project documentation.
- Using photographs and collected information as project evidence.
- Understanding the importance of hygiene and safe water storage practices.
- Creating awareness about water conservation and responsible water usage.

Overall, the Community Service Project provided practical exposure to community needs and drinking water-related issues. It helped the students develop social responsibility, communication, teamwork, observation, and basic technical skills while contributing to awareness about safe and responsible use of drinking water.

# 4.ACTIVITY LOG AND WEEKLY REPORT

## 4.1 Activity Log and Weekly Report for First Week

**WEEK-1:**

**Table 4.1: Activity log for the first week**

| Day & Date | Brief Description of the Daily Activity | Learning Outcome |
|---|---|---|
| Day–1 (25/5/2026) | Introduce project objectives, goals, and plan to the team. | Understanding project scope and individual roles. |
| Day–2 (26/5/2026) | Conduct surveys to identify the community's primary drinking pollution outcomes. | Gathering baseline data on water pollution problems. |
| Day–3 (27/5/2026) | Meet with local water authorities and community leaders. | Building partnerships and understanding stakeholder perspectives. |
| Day–4 (28/5/2026) | Plan and allocate necessary resources for survey, observation, and awareness activities. | Learning effective resource management in environmental projects. |
| Day–5 (29/5/2026) | Train team members on water-pollution observation, data collection, and safe environmental practices. | Developing team competency in pollution assessment and awareness. |
| Day–6 (30/5/2026) | Launch a campaign to educate the community about water pollution and cleanliness. | Increasing community awareness and engagement in protecting water resources. |

**From** Date: 25-05-2026 **to** Date: 30-05-2026

**Mentor Signature**

## WEEKLY REPORT:

**(From** Date: 25-05-2026 **to** Date: 30-05-2026**)**

## Objective of the Activity Done:

Objective of the Activity Done: Project Planning and Initial Managements.

## Detailed Report:

- Conducted surveys and interviews with local residents and community members.
- Gathered data on the availability, accessibility, and quality of the existing drinking water facilities.
- Identified key areas needing improvement, such as water quality, availability, sanitation, and water wastage.

## 4.2 Activity Log and Weekly Report for Second Week

**WEEK-2:**

**Table 4.2: Activity log for the Second week**

| Day and date | Brief Description of the Daily Activity | Learning Outcome |
|---|---|---|
| Day–1 (01/06/2026) | Begin collecting detailed water-pollution data from the community. | Hands-on experience in environmental data collection. |
| Day–2 (02/06/2026) | Conduct workshops on water pollution, sanitation, and waste disposal practices. | Educating the community on pollution prevention and preventive measures. |
| Day–3 (03/06/2026) | Start analyzing collected data to identify key water issues. | Developing skills in water quality data analysis and interpretation. |
| Day–4 (04/06/2026) | Organize water quality testing and awareness events for the community. | Identifying pollution-related issues and providing information. |
| Day–5 (05/06/2026) | Draft initial findings and observations from the collected information. | Enhancing report writing and documentation skills. |
| Day–6 (06/06/2026) | Collect feedback from the community on water-pollution awareness activities. | Learning to incorporate community feedback into project planning. |

**(From** Date: 01-06-2026 **to** Date: 06-06-2026**)**

**Mentor Signature**

## WEEKLY REPORT:

**(From** Date: 01-06-2026 **to** Date: 06-06-2026**)**

## Objective of the Activity Done:

Develop an improvement plan based on water-pollution assessment.

## Detailed Report:

- Analyzed survey data and identified priority areas for reducing water pollution.
- Created a plan outlining actions for better waste disposal, sanitation, cleanliness, and water-source protection.
- Scheduled discussions with local stakeholders regarding the proposed improvement plan.

## 4.3 Activity Log and Weekly Report for Third Week

**WEEK-3:**

**Table 4.3: Activity log for the Third week**

| Day | Brief Description of the Daily Activity | Learning Outcome |
|---|---|---|
| Day–1 (08/06/2026) | Continue collecting water-pollution data and updating records. | Ensuring comprehensive data coverage and accuracy. |
| Day–2 (09/06/2026) | Conduct sessions on water pollution, sanitation, and hygiene. | Promoting healthy environmental practices in the community. |
| Day–3 (10/06/2026) | Perform more detailed analysis of the collected pollution data. | Improving analytical and problem-solving skills. |
| Day–4 (11/06/2026) | Organize water-pollution awareness and observation programs in underserved areas. | Expanding awareness about protecting water resources. |
| Day–5 (12/06/2026) | Review project progress and make necessary adjustments. | Enhancing project management and adaptability. |
| Day–6 (13/06/2026) | Conduct follow-up surveys to measure impact and gather more information. | Evaluating the effectiveness of awareness activities. |

**From** Date: 08-06-2026 **to** Date: 13-06-2026

**Mentor Signature**

## WEEKLY REPORT:

**(From** Date: 08-06-2025 **to** Date: 13-06-2026**)**

## Objective of the Activity Done:

Implement initial phase of the water-pollution improvement plan.

## Detailed Report:

- Training focused on pollution prevention, sanitation, waste management, and protection of water resources.
- Coordinated available materials for awareness and observation activities.
- Monitored the initial response through feedback from community members and project team members.

## 4.4 Activity Log and Weekly Report for Fourth week

**WEEK-4:**

**Table 4.4: Activity log for the Fourth week**

| Day | Brief Description of the Daily Activity | Learning Outcome |
|---|---|---|
| Day–1 (15/06/2026) | Gather water-quality indicators and observations related to pollution. | Acquiring practical environmental data collection techniques. |
| Day–2 (16/06/2026) | Educate the community on water-pollution prevention practices. | Increasing awareness of pollution sources and prevention. |
| Day–3 (17/06/2026) | Conduct analysis to identify water-pollution issues. | Developing skills in water-pollution analysis. |
| Day–4 (18/06/2026) | Develop household and community pollution-prevention plans. | Applying knowledge to create actionable environmental plans. |
| Day–5 (19/06/2026) | D Document all activities, data, and findings comprehensively. | Improving documentation and record-keeping skills. |
| Day–6 (20/06/2026) | Discuss water-pollution prevention plans with community members. | Encouraging community participation and feed back. |

**From** Date: 15-06-2026 **to** Date: 20-06-2026

**Mentor Signature**

**WEEKLY REPORT:**

**(From** Date: 15-06-2026 **to** Date: 20-06-2026**)**

**Objective of the Activity Done:**

Evaluate the effectiveness of initial implementations

**Detailed Report:**

- Collected feedback from community members regarding the water facilities and changes implemented.
- Analyzed water quality and usage data to identify successful strategies and areas that still need attention.
- Adjusted the plan based on findings to improve water quality, availability, and safety.

## 4.5 Activity Log and Weekly Report for Fifth Week

**WEEK-5:**

**Table 4.5: Activity log for the Fifth week**

| Day | Brief Description of the Daily Activity | Learning Outcome |
|---|---|---|
| Day–1 (22/06/2026) | Complete the final round of data collection. | Ensuring all necessary data is gathered for final analysis. |
| Day–2 (23/06/2026) | Conduct follow-up workshops to reinforce key drinking water messages. | Strengthening the impact of previous water safety education efforts. |
| Day–3 (24/06/2026) | Perform the final comprehensive analysis of all collected data. | Concluding data analysis with detailed insights. |
| Day–4 (25/06/2026) | Finalize the project report with all findings and recommendations. | Producing a professional and detailed project report. |
| Day–5 (26/06/2026) | Prepare and practice the project presentation. | Developing presentation and public speaking skills. |
| Day–6 (27/06/2026) | Present the project findings to stakeholders and the community. | Sharing results and impact, receiving feedback. |

**From** Date: 22-06-2026 **to** Date: 27-06-2026

**Mentor Signature**

## WEEKLY REPORT:

**(From** Date: 22-06-2026 **to** Date: 27-06-2026**)**

## Objective of the Activity Done:

Finalize and document improvements and future recommendations.

## Detailed Report:

- Documented best practices and lessons learned throughout the project.
- Summarized outcomes including improvements in pollution awareness, sanitation, waste disposal, and protection of water resources.
- Presented the final report to local stakeholders.

## 4.6 Activity Log and Weekly Report for Sixth Week

**WEEK-6:**

### Table 4.6: Activity log for the Sixth week

| Day | Brief Description of the Daily Activity | Learning Outcome |
|---|---|---|
| Day–1 (29/06/2026) | Explained about water-pollution prevention practices to the people in the village. | I explained the importance of protecting clean water sources. |
| Day–2 (30/06/2026) | Explained about proper waste disposal and keeping drains clean. | I advised people not to throw waste into drains or water bodies. |
| Day–3 (01/07/2026) | Explained about hygiene, sanitation, and preventing contamination of water sources. | I came to know that proper sanitation helps reduce water pollution. |
| Day–4 (02/07/2026) | I allocated the remaining work and implemented my project activities. | The project activities were successfully completed. |
| Day–5 (03/07/2026) | I went to my project guide with my survey and report and explained my project briefly. | I came to know about the mistakes in my project and rectified them with the help of my project guide. |
| Day–6 (04/07/2026) | Finally, I completed my Community Service Project on Water Pollution. | I gained knowledge about water pollution, sanitation, waste management, and community service activities. |

**From** Date: 29-06-2026 **to** Date: 04-06-2026

**Mentor signature**

## WEEKLY REPORT:

**(From Date: 29-06-2026 to Date: 04-07-2026)**

## Objective of the Activity Done:

Finalize and document improvements and future recommendations.

## Detailed Report:

- Documented best practices and lessons learned throughout the water-pollution project.
- Summarized the outcomes of the project, including improvements in pollution awareness, cleanliness, sanitation, and responsible waste disposal.

# 5.OUTCOMES DESCRIPTION

## 5.1 Socio-Economic Survey on Village/Habitation

A socio-economic survey was conducted in the selected village to understand the water-pollution situation. The survey focused on the condition of local water sources, waste disposal, drainage, sanitation, and awareness about pollution prevention. Information was collected from local households through direct interaction and observation. The main water sources include borewells, public water supply, hand pumps, and other local sources. Residents were asked about visible pollution, waste disposal practices, drainage problems, and changes in water quality.

The survey highlighted the importance of proper maintenance of water sources and surrounding areas. Some water-pollution concerns may be associated with improper disposal of household waste, wastewater, stagnant water, and poor drainage. Awareness about sanitation and responsible waste disposal was also considered. The survey findings help identify water-pollution-related problems and suggest measures for protecting local water resources.

## 5.2 Questionnaire

The socio-economic survey focused on water sources, cleanliness, waste disposal, drainage, visible pollution, and awareness about environmental protection. The questionnaire included the following questions:

1. Is drinking water available regularly throughout the year? What is the main water source used by your household?
2. Is the water source available regularly throughout the year?
3. Do you notice pollution or waste near the water source?
4. Do you think the available water is clean and safe?
5. Are household wastes disposed of properly in your area?
6. Are drains near your house cleaned regularly?
7. Do you notice changes in the colour, smell, or appearance of local water?
8. How far is the nearest water source from your house?
9. Are local water sources properly maintained?
10. What are the major water-pollution problems faced by your household?

11. Are you aware of methods to prevent water pollution?,
12. What suggestions would you give to reduce water pollution in the community?

## 5.3 .Problems identified in the community

Short-Term and Long-Term Action Plan for Possible Solutions for the Identified Problems.

To address identified water-pollution problems in the village/habitation, a combination of short-term and long-term action plans is essential. In the short term, regular observation and basic water-quality monitoring can be conducted to identify possible pollution and protect local water sources. Temporary clean-up activities can be organized around affected areas.

Community awareness programmes can educate people about proper waste disposal, sanitation, drainage maintenance, avoiding dumping into water bodies, and water conservation. Cleaning drainage channels, removing accumulated waste, and maintaining existing water-source surroundings can also reduce pollution.

In the long term, investment in sustainable sanitation and waste-management infrastructure is important. Improving drainage systems, providing suitable waste-collection facilities, protecting water bodies, and maintaining reliable wastewater-management systems can reduce pollution. Regular monitoring and community participation can help achieve a cleaner and more sustainable water environment.

Strengthening local environmental management through regular monitoring and responsible waste disposal can improve the condition of water resources. Educational programmes can empower the community to adopt better environmental practices. Encouraging community participation in planning and decision-making can ensure that solutions are suitable and sustainable.

By implementing these short-term and long-term action plans, the community can address immediate pollution concerns while building a foundation for lasting improvements in water quality and environmental health.

## 5.4. Solutions for the problems

Description of the Community Awareness Program Conducted w.r.t. the Problems and Their Outcomes

To address the identified water-pollution problems in the village/habitation, a comprehensive community awareness programme was conducted. The primary aim was to educate the community about the causes and effects of water pollution, proper waste disposal, sanitation, protection of water sources, and water conservation. Various activities were conducted to encourage community participation.

The programme included awareness sessions focusing on proper disposal of household waste, keeping drains clean, avoiding dumping waste into water bodies, maintaining sanitation, and protecting local water sources. Educational materials such as pamphlets and posters can be used to provide information about pollution prevention and conservation.

Water-source awareness activities were also conducted to encourage community members to observe cleanliness around local water sources and report pollution-related problems. Discussions helped families understand simple pollution-prevention practices. Community leaders and volunteers participated in the programme and encouraged responsible environmental practices.

The outcomes of the programme included increased awareness about water pollution and its prevention. Community members were encouraged to improve waste-handling practices, maintain cleanliness around water sources, and avoid activities that can introduce pollutants into water. The programme also increased awareness about water conservation and maintenance of local facilities.

Overall, the community awareness programme helped educate the village/habitation regarding water-pollution prevention. Continued awareness activities, regular observation of water sources, proper sanitation, and community participation can help maintain these improvements.

## 5.5 Community Problems and Outcomes

An awareness programme on water-pollution prevention was conducted in the selected community based on problems identified during the survey. The programme focused on clean water sources, proper waste disposal, drainage maintenance, sanitation, and protecting the surrounding environment. Community members were informed about avoiding disposal of household waste and wastewater near water sources.

The programme encouraged residents to take care of local water resources and report pollution-related problems when necessary. Community members participated and shared their concerns. The programme helped improve awareness about pollution prevention and environmental cleanliness and encouraged simple steps to protect local water resources.

Overall, the programme helped the community understand the importance of preventing water pollution and maintaining clean, healthy, and reliable water resources.

# 6.MINI – PROJECT WORK REPORT

## 6.1 Introduction

Water is one of the most important natural resources for human life, agriculture, animals, and the environment. Clean water is necessary for drinking, cooking, sanitation, agriculture, and other daily activities. Water pollution occurs when harmful substances, waste, chemicals, sewage, or other pollutants enter water resources and reduce their quality.

As part of the Community Service Project, a study was conducted in the selected village/habitation to understand local water-pollution concerns and the problems faced by the community. The project focused on the condition of water sources, possible pollution sources, waste disposal, drainage, sanitation, and community awareness.

During the survey, information was collected from households regarding their main water sources, visible pollution, waste-disposal practices, drainage conditions, water-quality concerns, and environmental problems. Residents were encouraged to share their opinions and difficulties related to water pollution.

The project also included a community awareness programme on protecting water resources. Community members were informed about proper disposal of household waste, keeping drains clean, avoiding dumping waste into water bodies, maintaining sanitation, and reporting pollution problems.

The main purpose was to identify water-pollution-related problems, create awareness, and encourage responsible environmental practices. The information collected can help understand the existing situation and identify possible measures for reducing water pollution.

## 6.2 Need for the Project

Water is an important requirement for every community. Although different water sources may be available, their quality can be affected by waste disposal, sewage, drainage problems, agricultural activities, and other local pollution sources. Some communities may face polluted surroundings, improper waste disposal, stagnant wastewater, poor drainage, or lack of awareness about water protection.

The Community Service Project was taken up to understand these issues at the local level. Direct interaction with community members helped identify their needs and concerns. The project also provided an opportunity to create awareness about protecting clean water resources.

The need for the project is also related to proper waste management and sanitation. Careless disposal of waste or wastewater near a water source can create a risk of contamination. Therefore, awareness about proper waste disposal, drainage, cleanliness, and safe environmental practices is important.

## 6.3 Importance of Clean Water

Preventing water pollution is necessary for protecting human health, aquatic life, agriculture, and the overall environment. Water sources should be protected from harmful waste, sewage, chemicals, and other pollutants. Clean water also supports proper hygiene and sanitation practices.

People may depend on public water supply, borewells, hand pumps, tanks, ponds, streams, or other local sources. The condition of these sources can be affected by surrounding land use, drainage, waste disposal, and maintenance.

Pollution-prevention practices should be followed at household and community level. Household waste should be disposed of through suitable collection systems instead of being thrown into drains or water bodies. Wastewater should be managed properly and surrounding areas should be kept clean.

Awareness about water pollution is important. Regular observation and suitable monitoring can help identify possible pollution sources. Community members can take practical steps to protect water resources.

## 6.4 Water Pollution and Community Health

Water pollution has an important connection with community health. Polluted water may contain harmful microorganisms, chemicals, or other substances that can create health risks. Maintaining water quality is therefore an important responsibility of households and the community.

Good sanitation and waste-management practices can help protect water resources. Proper disposal of waste, keeping drains clean, avoiding dumping near water sources, and maintaining cleanliness are simple practices that can be followed by everyone.

Water pollution can also affect animals, plants, agriculture, and aquatic ecosystems. People should therefore take care while disposing of household, agricultural, and other wastes that may reach water sources.

Proper management of wastewater is important. Stagnant wastewater and blocked drains can create unhygienic conditions and may allow pollutants to reach nearby water sources.

Clean surroundings around water sources help reduce pollution. Waste materials should not be thrown near wells, tanks, ponds, streams, taps, or other water sources. Drainage areas should be kept clean so that dirty water does not mix with clean water resources.

Community members were encouraged to follow simple environmental practices such as proper waste disposal, clean drainage, and protection of local water sources.

Residents can contribute by avoiding unnecessary pollution, reporting damaged or blocked drainage facilities, and keeping areas around water sources clean.

Children and family members can also help maintain clean environmental practices at home. Developing good habits at an early age can help create a healthier community.

## 6.5 Objectives of the Project

The main objectives of the Community Service Project on Drinking Water are:

1. To study the water resources available in the selected community.
2. To identify the major sources and possible causes of water pollution.
3. To understand the problems faced by residents due to polluted surroundings or water sources.
4. To study waste-disposal and drainage practices in the community.
5. To understand community awareness about water pollution.
6. To create awareness about preventing water pollution.
7. To promote proper waste disposal and sanitation practices.
8. To create awareness about protecting local water sources.
9. To encourage community members to maintain cleanliness around water resources.
10. To collect suggestions from residents for reducing water pollution.
11. To understand the importance of community participation in environmental protection, and To suggest suitable measures for preventing and controlling water pollution.

## 6.6 Study Area / Community Profile

The Community Service Project was conducted in the selected village/habitation. The study area consists of residential households and basic community facilities. People depend on local resources for their daily requirements. Agriculture and other local occupations provide livelihood opportunities for many families.

Water is an important requirement of the community. Different households depend on different water sources according to location and availability. The main sources observed during the survey included borewells, public water supply, hand pumps, and other local sources.

The survey was conducted by interacting with residents and observing water resources and surrounding areas. Community members provided information about waste disposal, drainage conditions, cleanliness, seasonal problems, and water-related concerns.

The study area was selected to understand practical water-pollution problems faced by the community and to create awareness about preventing pollution and protecting water resources.

## 6.7 Survey Methodology

A simple survey methodology was followed to collect information from the community. A questionnaire covered water sources, pollution, waste disposal, sanitation, drainage, and environmental awareness.

The survey team interacted directly with residents and collected information from households. General observations were made regarding water sources, waste accumulation, drainage, and cleanliness.

The survey included questions related to the main water source, visible pollution, waste disposal, drainage maintenance, water-quality concerns, and awareness of pollution-prevention practices.

The information collected through questionnaires and discussions was reviewed to identify common problems and community needs. The findings were then used to plan an awareness programme.

The survey also helped in understanding the importance of community participation. Residents were encouraged to share suggestions for improving the water-pollution situation.

## 6.8 Water Pollution Sources

The community has different water sources that may be affected by local environmental conditions. The main sources identified include borewells, public water supply, hand pumps, ponds, drainage channels, and other local water resources.

Possible sources of water pollution include improper disposal of household waste, wastewater entering drains, dumping of solid waste near water sources, poor sanitation, agricultural runoff, and other activities that allow pollutants to enter water resources. The level and type of pollution may vary by location and season.

Regular cleaning of surrounding areas, proper waste management, maintenance of drainage facilities, and monitoring can help reduce pollution.

During the survey, students discussed water-pollution sources and environmental practices with community members. Proper maintenance of borewells, hand pumps, water tanks, ponds, drainage channels, and public water facilities is important for protecting water resources.

Any leakage, damage, blockage, or pollution should be reported to concerned local authorities or responsible persons. Residents can help by keeping surrounding areas clean and avoiding disposal of waste near water resources.

Seasonal changes can affect the condition of water resources. During rainy periods, waste and pollutants from surrounding areas may be carried into water bodies through runoff. During periods of low water availability, pollutants may become more concentrated in some water resources. Responsible use and protection are therefore important.

## 6.9 Existing Water Facilities

The existing water-related facilities include household water connections, public water sources, borewells, hand pumps, water storage facilities, drainage systems, and other local infrastructure. Availability and condition may differ between areas of the village. The condition of drainage and waste-disposal facilities is important. Blocked drains, stagnant wastewater, and improper waste disposal can increase the possibility of pollutants reaching water resources. Proper maintenance of pipelines and other facilities is therefore important.

## 6.10 Water Usage and Storage Practices

Water resources should be protected from waste and pollutants. Household waste should be disposed of through appropriate collection systems instead of being thrown into drains, ponds, streams, or other water bodies. Keeping drains clean and avoiding stagnant wastewater can reduce pollution risks.

Community members were advised to keep surrounding areas clean and avoid dumping waste near water sources. Residents can report illegal dumping, blocked drains, damaged facilities, or other visible pollution problems to responsible authorities.

Simple household-level measures can support better environmental hygiene and help protect water quality. Preventing water pollution depends not only on maintaining water sources but also on how waste, wastewater, and surrounding areas are managed.

Responsible waste disposal, proper sanitation, clean drainage, and community participation are therefore important parts of maintaining a healthy environment.

# 7.RECOMMENDATIONS AND CONCLUSIONS OF MINI-PROJECT

## 7.1 Recommendations

Summary of Findings: The mini-project focused on understanding and reducing water pollution in the village/habitation and addressed several environmental issues identified through the socio-economic survey. Key interventions included water-pollution awareness programmes, observation of local water sources, discussions about waste disposal, sanitation awareness, and pollution-prevention practices.

Impact Assessment: The project helped increase awareness about avoiding waste disposal near water sources, maintaining clean drainage, and protecting local water resources. Increased awareness about pollution sources and responsible waste management can help reduce the risk of water contamination and environmental damage.

Challenges and Lessons Learned: The project faced challenges such as collecting information from different households, observing pollution sources in different locations, maintaining community participation, and explaining environmental practices in simple terms. These challenges highlighted the need for better planning, regular monitoring, resource management, and continued community participation.

Engaging community leaders and local participants proved important for spreading awareness about water-pollution prevention, sanitation, waste management, and protection of water resources.

Future Directions: Future efforts should focus on continuing community awareness programmes, improving waste-management and drainage facilities, protecting local water bodies, and maintaining clean surroundings. Regular observation and basic water-quality monitoring can help identify pollution problems at an early stage.

Further, proper maintenance of drainage systems, responsible disposal of household and agricultural waste, and community participation will be essential for reducing water pollution and maintaining a healthy environment in the long term.

## 7.2 Conclusion:

In conclusion, the mini-project made a contribution to increasing awareness about water pollution and environmental protection in the village/habitation. By identifying possible pollution sources and discussing practical prevention measures, the project helped the community understand the importance of protecting water resources.

Continued awareness, proper waste disposal, sanitation, regular monitoring, and community engagement will be important for maintaining cleaner water resources and a healthier environment.

# Student Self-Evaluation for the Community Service Project

| | | |
|---|---|---|
| **Student Name:** Shaik Mahaboob Basha | | |
| **Registration No:** 25095A3705 | | |
| **Period of CSP:** 6 WEEKS | **From:** 25-06-2026 | **To:** 04-07-2026 |
| **Date of Evaluation:** | | |
| **Name of the Person in-charge:** Mrs. C. K. Indira **M. Tech., (Ph.D.)** | | |
